

ABSTRACT OF THE DISCLOSURE

A flange cover with a trim lip is provided for finishing a vehicle flange, wherein the flange cover can include a seal. The flange cover is affixed to a single side of the flange and the trim lip projects from an opposed side of the flange to be spaced from the flange. The trim lip can be sized to contact an interior trim piece of the vehicle to occlude a gap between the flange and the interior trim piece. A seal can be operably located on an outside surface of a flange engaging leg.
